Q: SSL communication between Node.js server and Android client I have created a client for my Node.js server and I want it to communicate securely with the Node.js server. The server is protected by an Express SSL application, let's call it "server1". Server1 is protected using and the port 443. The Android app that communicates with the server is a regular Java application that uses the scheme and is being served by the Express application using the scheme on the same port (I have added the port manually to the build file). To get the node app to recognize that the client is a secure connection, the client gets a certificate from its server and sends it to server1 to obtain a session key. I have doubts about this communication and how secure it is. Will server1 open up a SSL session to the client and then answer back to the client or will it open up a SSL session to a private listener and then answer back? If this is not secure, how to I correctly create a secure communication to Node.js from my Android app using the scheme? Thanks. A: Will server1 open up a SSL session to the client and then answer back to the client or will it open up a SSL session to a private listener and then answer back? That depends on how the server is configured. If you're using an Express.js application as the server, then that will use one of the built-in middleware functions to handle the SSL. If it's one of your own custom middleware functions, then it'll be a lot more explicit in how it's doing things. The openssl package has many functions and modules to do the basic work of SSL/TLS handshake and then typically does some more complicated work. You would typically configure the server to require an SSL certificate to be presented, and if you're using Express.js (for example) then you would use something like this inside the app's server.js file: 

```
var express = require('express'); var app = express(); var https = require('https'); // If you're using the Express function, you may already be running your server // as 3da54e8ca3
```
