Since 1985, AutoCAD has been offered as a subscription-based service. It is an owner-supported product; AutoCAD is available for a price as long as users continue to renew their subscriptions. In 2017, 2.9 million people, 3.5 million in 2016, 2.7 million in 2015, and 2.8 million in 2014, used AutoCAD. Some users rely on the software to support their businesses. Others use it to create 2D and 3D drawings, designs, and technical schematics for construction projects, in the mechanical, electrical, and plumbing (MEP) trades. AutoCAD is also used by architects, planners, engineers, and construction professionals. Many millions of users around the world use AutoCAD for free in a non-commercial setting. Why do we call the AutoCAD.compact version "Mini"? AutoCAD AutoCAD.compact was introduced in 1992. It was intended to lower the price of AutoCAD, by reducing the memory requirements for the program and adding features that the regular AutoCAD program did not include. AutoCAD is the most widely used graphics software in the world. It was developed by Autodesk for the desktop and is a relatively inexpensive, comprehensive solution for CAD (computer-aided design). Approximately 95% of the drawings and designs made by architects, engineers, contractors, and building inspectors use AutoCAD. AutoCAD provides many drawing and annotation tools, including: Scale and projection functions. Lines. Rectangles and other shapes. 3D shapes. Text. Smart art. C++ ObjectARX allows a user to create add-ons which run in a separate application and communicate with Autodesk's AutoCAD application. OpenEdge OpenEdge also has a similar technology called ODE that allows users to create an add-on which allows users to modify the behaviour of AutoCAD. The add-on is created using a special language similar to Visual Basic or LISP. In this paper we consider the widespread and growing liability to compensate individuals for the effects of environmental health hazards in everyday life. The U.S. Supreme Court has held in part that a state may not require an individual homeowner to bear the cost of compensating a neighbor for the physical effects of noise or odors emanating from his home. However, the Court's opinion did not address whether such a neighbor is entitled to recover damages from the negligent manufacturer or distributor of products that generate the noise or odors. A body of federal law exists holding that producers of products that may affect the health of others are liable for the injury that occurs when the product is used as intended. These laws are inapplicable to noise and odors emanating from homes, but there is a large body of case law that has applied these laws to effects on public health. Additionally, some states have enacted statutes that allow victims of negligence to recover damages for physical harm caused by odors, noise, or the emission of air pollutants. We argue that these common law and statutory rules of liability should be extended to actions against manufacturers and distributors of products that produce or contribute to noise, odors, or other health hazards in homes.1. Ask HN: What's wrong with the current patent system? - danr4 For the most part I think the current patent system is working fine. But a lot of innovation is being stifled by patents. The current system seems to be: 1. Get patent. 2. Wait for someone to file a patent on an "important" technology that has been in development for years, and patent it. 3. Inventors can now patent the thing that was filed and held for years in #2, but have to pay to use the patent in #2. The end result is "the current patent system rewards people who are brilliant at patent filing, and doesn't reward inventors for working on their inventions for years and years." Isn't there any way to make it better? ===== danr4 To be clear, I don't think there is a way to make it better. It's an inherent proposition of the current system that it rewards patent filing, and doesn't discourage inventors from working on their inventions for years and years. I do think there are ways to make it better, such as: 1\ Not allowing patents on things that are obvious. 2\ Not having the goal of "I want to get rich from this", but rather "I want to help humanity". ----- simonblack As always, the best solution is to ignore the problem and continue to make use of the inventions. We had a few

What's New in the AutoCAD?

Make simple design adjustments with the new Markup Assist feature. You can simply "stick" notes, highlight parts, and view "footprints" to add quick notes. You can even add text boxes and line weights for additional design details. (video: 1:03 min.) Drafting: Create forms for advanced tracing with the Revit add-on. Use revit to trace your mechanical or electrical schematics quickly and accurately. Receive feedback with the revit_ui tool. (video: 1:32 min.) Add 3D geometry with the ANSYS add-on. Create 3D models to increase your designs' accuracy and effectiveness. Add, rotate, scale, and rotate 3D models. Add 3D geometry without CAD on documents. (video: 1:21 min.) Add 3D detail and help your drawings more accurately communicate design intent. Add auto-nesting features to create 3D shapes. Trim designs, add Z and area data, auto-orient based on cell size, and use a constant shape. (video: 1:23 min.) 3D Drafting: Use the new ANSYS add-on to add 3D geometry to your drawings. With 3D modeling, you can easily add 3D shapes, make edits, and view designs with ANSYS directly in your drawings. (video: 1:24 min.) Add vCAD assemblies to your designs. Use assemblies to store and move parts. Create and use assemblies in CAD with the new vCAD add-on. Add assemblies and parts with constraints to your drawings and revit. (video: 1:17 min.) Revit 3D: Use the new vCAD add-on to create assemblies and models directly in Revit and send assemblies to external platforms. Use assemblies to store and move parts in CAD. You can also import and export Revit from external platforms like Excel and MATLAB. (video: 1:35 min.) Animation: Add motion to your drawings with the new vCAD add-on. Animate your designs or even easily integrate motion into your drawing. Your designs will move with your drawings with the new vCAD add-on. (video: 1:20 min.) Export and receive motion in Revit. vCAD will export your designs to as many as four platforms including Revit. For any platform,
