This primer aims to introduce Photoshop to beginners, with an emphasis on creating raster images. Composing A New Graphic To jump start this tutorial, you'll be creating a new image in your Image Editor. You'll be filling an empty canvas with a new graphic.

For this tutorial, you'll be creating a basic circle. 1. Open an image or canvas in your Photoshop and click on the "Fill" tool in the Tools panel. From the drop-down menu of tools available, select the "Freeform" tool (see Figure A). Figure A Open an image or canvas in your Photoshop and click on the "Fill" tool in the Tools panel. From the drop-down menu of tools available, select the "Freeform" tool. 2. Draw an ellipse on the canvas. To do this, double-click once on the canvas, and then move the mouse to create the shape. When you are done, click once on the canvas in the approximate center of your shape. Figure B Draw an ellipse on the canvas. To do this, double-click once on the canvas, and then move the mouse to create the shape. When you are done, click once on the canvas in the approximate center of your shape. 3. Double-click once again on the canvas to activate the "Fill" tool. Using the "Freeform" tool, draw another ellipse on the canvas. When you are done, you should have two freeform ellipses on the canvas. Figure C Double-click once again on the canvas to activate the "Fill" tool. Using the "Freeform" tool, draw another ellipse on the canvas. When you are done, you should have two freeform ellipses on the canvas. 4. In the Tools panel, click on the "U" drop-down menu and select the Gradient tool (see Figure D). Figure D In the Tools panel, click on the "U" drop-down menu and select the Gradient tool. 5. Click twice on the canvas in the top left corner. By doing this, Photoshop creates an angled guide for you to follow. 6. Using the gradient tool, drop down the opacity of the gradient and click once again on the canvas to create a path. Figure E Using the gradient tool, drop down

Why did the most celebrated physician-scientist who ever lived spend his last years publishing mainly on gender issues in medicine? Karel F. Blok's three-volume masterpiece, *The Anatomy of Communication*, was published posthumously in 1932. In it, he espouses a new way of thinking about the art and practice of communication. He specifically debunks the mental association of words with things, emotions with feelings, and ideas with intellects, by suggesting that "men do not believe that they think, but that they think they think." Blok also assumes that the analogy of "words are things" may be true in some cases, but that the association is only valid for short, snappy nouns, such as names, colours, and professions. This is in contrast with the notions of inspiration and expression, which he finds to be true and omnipresent. Blok's insights have come to be called "new anthropology," which is the model we now use in our medical humanities program. However, this medical humanities model was not applied to the study of medicine. In the 1930s, Blok's ideas were looked upon as an intriguing hypothesis. A number of medical historians have demonstrated that his ideas about "new anthropology" were similar to current theories of psychology developed in the same era. Blok was born in the Netherlands in 1883, and went on to become an esteemed biologist, philosopher, and psychologist. Over the course of his life, he made a number of discoveries in the field of psychology, biochemistry, and biology, including the treatment of eating disorders (the first known successful treatment) and the near-perfect imitation of specific cells (the first known artificial reproduction of a living tissue). He was a bold and controversial figure, and his views frequently clashed with the views of the orthodox scientific community of his time, such as the anti-vivisectionists of the early twentieth century, those who argued against the infallibility of the written word, and those who believed in the importance of placebo. Blok's books and research are now considered an important contribution to the fields of communication and medical humanities. His new anthropology has come to be used as an influence in areas of education, law, even art. His ideas have inspired the development of related medical humanities practices, such as the medical humanities in clinical practice, the doctor as a communicator, and a new

Q: How can I prevent my git repository from altering the names of files that are being imported? I have a git repository (versioned with GitHub Pages). When I pull the source from the repository it changes the file names to the branch names, even though the file

name is the same in both the branch and the master. For example, if the branch was branchA and the master was master, but I merged branchA into master, and I pulled the source, the source should look like this: src/ form/ input.php output.php /main.php But, it is actually: src/ branchA/ form/ input.php output.php /main.php master/ form/ input.php output.php /main.php Is there a solution to prevent this from happening? My current solution is to do a pull first to update the master, then do a pull to update the branch. But, this is quite tedious and I prefer to do an automatic pull. Any help is appreciated!

A: It is a known issue with GitHub Pages. I suggest either setting up a local branch to serve as a development branch (or a branch you can do all your development on), or using Jekyll.

Q: Replace figure name with figure number in Grid-diagrams I want to replace figure names with figure numbers in the Grid-diagram in a LaTeX document. So instead of figure 1 I want to have figure 1 How can I do that? I tried to search the page for the string "figure", but did not find the option.

A: In there, the figure
