To determine the characteristics and clinical importance of asymptomatic pleural effusion (PE) detected by a routine chest radiograph in children. A retrospective chart review of all chest radiographs obtained between February 1994 and May 1998 at a tertiary care children's hospital. Five hundred and thirty-nine children who had a PE on a routine chest radiograph at presentation were identified and the data were collected by chart review. Fifty-nine (11%) were asymptomatic. Children who were asymptomatic were more likely to be younger than 3 years old and to have a milder illness compared with those with a PE who were symptomatic (p Mascara Beauty Care Hakea vulgaris A shrubby (bushy) member of the Proteaceae, the Australian Heath family, the cocklebur thrives on broken clay, and prefers a moderately well-drained soil.
