After a six-month treatment of male Syrian golden hamsters with 0.05% N-nitrosobis (2-oxopropyl)amine, 10-40% of the animals developed cancers of the exocrine pancreas (further subdivided into pancreatic, duodenal and ampullary). The occurrence of tumors was highest in the hamsters weighing greater than 50 g and it was independent of sex and litter size. In contrast to the previous findings in the esophagus, stomach, small bowel, large bowel and lung, no association was found between the development of pancreatic carcinoma and the appearance of mucin-secreting tumors of the stomach or duodenum, as well as between the occurrence of carcinomas of the small and large intestines. The occurrence of the pancreatic tumors, but not of those of the duodenum and ampulla, was also independent of the degree of fatty change of the exocrine pancreas. One of the tumors of the exocrine pancreas was typical of a pancreatic adenocarcinoma, whereas the other four resembled undifferentiated carcinomas. Furthermore, in the hamsters treated with N-nitrosobis (2-oxopropyl)amine there was a significant association between the appearance of pancreatic tumors and an increased production of endogenous copper. The production of copper by the pancreas during the development of carcinoma was confirmed by autoradiography using the radioiodinated aromatic ligand N-(3,4,5-3H-2-2-acetamido-5-methoxybenzyl) aniline (AM-4 af5dca3d97

### What's New in the?

Imported changes are applied to a locked model. When importing, change the number of objects in your drawing, and select which objects will be changed. Changes can be applied to as many objects as you want. Use a percentage when importing, based on the size of the imported object. Export your imported changes. When exporting, you can choose to keep the imported changes (under the Export/Change menu) or lose the imported changes. You can also use the document properties dialog to export the changes you've imported. Markup Text layers: Stay consistent with the style of your content using the built-in Markup Text layer. You can customize how content is displayed in the layer in the Markup Text Style and Layout tabs. Prevent the display of text that you don't want to see. You can toggle the display of groups and layers on and off. Apply a background color to the text. Markup Bmp layers: Make it easier to visually see your drawing on a white background by creating one of your own. The built-in Markup Bmp layer automatically centers text in your drawing, so you can see it from anywhere in your drawing. You can change the size of your drawing with the Markup Bmp Size dialog box. Preview the Markup Bmp layer in real time with the Markup Bmp Preview dialog box. Markup Copy layers: Quickly access your content with the built-in Markup Copy layer. You can easily copy and paste content directly from the Markup Copy layer to your drawing. Note: Copy layers support only the single-layer mode of AutoCAD 2010 and earlier. Markup Grid layers: With AutoCAD Grid, you can apply a new style to your drawing to align objects across multiple dimensions. You can also use the new Grid Snap feature to align objects more accurately. Use AutoCAD's built-in Grid Style dialog box to specify how to show and edit objects. With the Snap option of the dialog box, you can specify where to snap when you add, edit, or delete objects. In your drawing, you can use the built-in Select Objects dialog box to turn on Grid Snap for an entire drawing or for selected
