For instance, a landlord may do so in order to determine whether a third party has a greater right to possession than the tenant. Furthermore, a landlord may do so in order to determine whether the tenant is violating the lease and, if so, what action is required of the tenant. 32 The lease before us purports to give the tenant an exclusive right to possession of the leased property for the term of the lease. For most purposes, the parties intended the tenant to have such a right. Nevertheless, it is a landlord's right to determine the parameters of the right of possession it has retained. The district court's decision holds the landlord to that standard, and the landlords do not have the right to put the cart before the horse. Accordingly, we reject the district court's position. 33 As noted above, this Court has not yet had occasion to address the question of whether a landlord may exercise the right of possession it has retained. The Court of Appeals for the Ninth Circuit, however, has addressed that issue. In *Mitchell v. La Palma Plaza Operating Co.*, 514 F.2d 717, 720-21 (9th Cir.1975), the Court held that a landlord was entitled to seek the assistance of the federal courts to determine the boundaries of the tenancy. As the Court pointed out, 34 [i]t has long been the rule in this circuit that a landlord has a right to seek assistance of the federal courts in determining the limits of a tenancy. The landlord may not, however, use the court to determine what right it has retained. 35 *Id.* (citing 3 *Powell on Real Property* Sec. 413 at 517-19 (1974)). See also *Garrison v. Seaboard Commercial Corp.*, 60 F.Supp. 599, 601 (E.D.La.1945) (finding tenant in possession and concluding that landlord had no right to repossess because lease did not give landlord the right to enter leased premises). 36 The district court appears to have based its conclusion on two cases, *Dolan v. Housing Authority of City of Milwaukee*, 476 F.2d 1119 (7th Cir.1973) and *Marini v. Ireland*, 56 N.Y.2d

What's New In?

Manage layers of multiple sheet sizes in drawings. Drill down into label layers that can contain multiple label types in one layer, and create labels for each label. Create and manage annotations that run through all views of a drawing. Share design-related graphics with others via email, Dropbox, and more. Connect to a wider range of cloud resources for sharing and collaboration. The New Free Handed Precision Layout (PCL) is now the default layout, and can be accessed from the View menu. Better security: Secure drawing access for users with strong permissions. New document properties to help administrators control and manage document access for your entire organization. What's new in AutoCAD LT 2023: Shape and image editing: Introducing AutoCAD LT 2023. Completely updated to reflect the visual improvements in the new Ribbon and increased ease of use. You can now import and export multisheet alignments and positions, import and export multiline and multiuser text annotations, and export and import graphics along with the text. In addition, the default imaging software is now TWAIN, for better compatibility with various scanners and printers. (The previous default was Microsoft's Image Resizer.) Enhancements in the 2D Editing Area: In AutoCAD LT, the ribbon bar is now two columns wide, making it much easier to see important tools and navigate the drawing. Multiline and multiuser text annotations that are on separate layers are no longer part of the same layer as the text. This allows you to clearly distinguish the text layer from the annotation layer. You can select up to 20 text, point, or path annotations and convert them to paths or text. Show and hide the editing area ribbon bar to customize your drawing's overall look. What's new in the Ribbon: Ribbon symbols are now color-coded to help you easily identify and use them. The project history is now available in the ribbon bar. The Project Pane is no longer available in the New Task dialog. The custom tabs bar is now available in both the New Task and New Ribbon dialogs. Tool bar and ribbon commands are now grouped in one location: Clear view Transform view Modify view Layout view
