The capacity of rabbit immune sera for passively protecting the eye of rabbits challenged with herpes simplex virus type 1 (HSV-1) was investigated. HSV-specific antibody-dependent cytotoxic (ADCC) antibodies were identified that could protect the eye of HSV-infected rabbits against reinfection. The capacity of these ADCC antibodies to neutralize HSV-1 in vitro was also studied. In addition, antibodies binding to the HSV-1 major surface glycoprotein, gB, were found in sera from HSV-1-infected rabbits. The results indicate that

both the gB-reactive antibodies and the ADCC antibodies may contribute to protection of the infected rabbit eye.) and a child.
