You need two applications running in tandem. One to create and export keys and one to import keys. Its a very simple exercise. You can use this application to generate and then export your own keys from any phone to any location. You can then import them into the second application. The second application can then be configured to use these keys as the payment keys to your backend API. Nestled within the Florida Keys National Marine Sanctuary, the students of The College of the Florida Keys are just a boat ride away from studying the coral reef or exploring historic shipwrecks. The rich history and diverse culture create an environment that has inspired artists, poets, novelists, playwrights, scientists and even presidents. These keys are protected in single-tenant HSM-pools. You can import an RSA, EC, and symmetric key, in soft form or by exporting from a supported HSM device. You can also generate keys in HSM pools. Add to your existing model the new, slimmer body style of a sleek "Harmony" case, and you have one of the most handsome and functional synthesizers on the market. As one of the most advanced synthesizers available, Volca keys can be built up to 8 times larger and twice as deep as previous models, bringing you the KORG sound at its finest. Its compact size makes it an ideal solution for workstations, mobile devices and even in-car scenarios. This newcomer also achieves high playing performance with an on-board sequencer and a powerful and well-behaved midi implementation.
