While upgrading your motherboard BIOS version, it is important to back up your data to avoid any unwanted data loss. As it is recommended to make a backup of your data using some reliable data backup software before upgrading the motherboard BIOS.

DataBackup Plus Professional is a complete backup software that can save all your important data in multiple secure backup locations, including backup to CD/DVD, FTP server, network server, external Hard drive or USB flash drive. Asus TUF Gaming series motherboards use the Windows Hardware Certification Program (WHCP) for system certification. BIOS version 5.1.4.3 was released in December 2013 and has been in use for the new platforms at that time. For the more recently released motherboards such as Asus TUF 7, 5, 3 and 2, BIOS version 5.3.3.1 has been released and is available for download at our support page. For more information and to obtain the latest BIOS update for the Asus TUF series motherboards, please visit our support page (opens in new tab) or reach out to your motherboard manufacturer for official support. The original BIOS updates for Asus motherboards are not released by ASUS. Instead, a serial number can be obtained directly from ASUS. Please download the latest updated BIOS using your motherboard's serial number. If you do not know your motherboard's serial number, please contact your motherboard manufacturer for more information. We have obtained the BIOS for the following motherboards and will release the serial numbers for the latest updates for these motherboards as soon as they become available. Please follow your motherboard manufacturer for updates to these boards. If the serial number is not supplied, we will not be able to provide you with a new update.

However, you also have the possibility to update the BIOSes from the system BIOS or UEFI through an OEM application, such as the UEFI BIOS on Windows 10. We do not recommend this method as the application will not automatically check

the BIOS or migrate the data to the hard drive (HDD) or flash the BIOS. Furthermore, it is currently impossible for OEM manufacturers to make frequent updates to the BIOS. In addition to that, if you are updating a multi-gigabyte-BIOS, this method can affect the security of your PC. If you do not want

to deal with this hassle and risk, you should use the RBE to flash your BIOS and include a link to the latest BIOS file from the manufacturer if you wish to create a collection of similar Bioses. Even before the advent of Adrenaline 2020, a BIOS for RX 5700 XT was available on the web, but it

was not all that stable or usable. There was no genuine support for RX 5700 XT by AMD, but an A-Team member was able to provide a BIOS for another RX 5700 XT Radeons if only imperfectly. If you are among the first to test it and find any issues, please contact the editorial staff

and we will address them as soon as possible. We will also thoroughly document all progress and improve the software as usual. Below, you will find the more recent and stable versions of the BIOSes for Navi cards, which you can download and use right now, for example, on the RX 5700 XT or 5700 or

on your RX 5600 XT. With the other software we can write the modifications directly into the BIOS and output the new BIOS as a flashable file. However, this functionality is currently only available for RX 5700 XT, which is the reason for this separate download.
