THANGARAJ COMPUTER -Oriented Numerical Methods. COMPUTER .1. Field of the Invention The present invention relates to a clock generator used for a disk drive, which generates an appropriate clock signal for implementing a desired data transfer operation. 2. Description of the Related Art A disk drive, which is an external storage apparatus for a computer, has a drive motor that is driven to rotate a disk-shaped recording medium at a high speed. A read/write head provided on a distal end of a head arm is so driven as to move in a radial direction of the disk-shaped recording medium, so that data transfer is carried out between the head and the disk-shaped recording medium. In the disk drive, a drive controller is provided, which converts external control signals into timing control signals so as to give a timing control to the movement of the head. More specifically, a recording medium access time (RMA time) between the head and the disk-shaped recording medium is controlled according to, for example, the number of data sector groups recorded on the disk-shaped recording medium. Namely, the drive controller generates a timing control signal whose waveform is controlled so as to accomplish a drive timing on the basis of the RMA time. The drive controller takes advantage of various functions of a general-purpose CPU for implementing the control operation. Thus, the drive controller simultaneously executes a plurality of processing operations. As a result, the drive controller should execute a plurality of processing operations in response to a single external control signal at a predetermined timing. For this purpose, each of the plurality of processing operations is executed in a high-speed operation mode. When one of the plurality of processing operations requires a longer processing time than the others, the processing operation is executed in a high-speed processing mode, while the others are executed in a low-speed processing mode. Thus, the entire processing operation can be accomplished in a period of time shorter than the RMA time. Therefore,
