First, you need to go to the Adobe website and download a copy of the version of Photoshop that you want to use. Open the download file and then open the installation file. Press the install button to begin the installation process. After the installation is complete, you should exit the program and launch it again to make sure that the software is installed properly. The latest in-app updates to Photoshop Elements address issues that still exist in the software as we've come to expect. For Windows users, the app now assumes standard DPI sizes, and the toolbars have been resized to work better with these. You can still turn on the old Windows-style interface if you want, while you're in another app. It would be nice to have more time with a pre-release version of Photoshop Elements, and while I'd really like an iPad version of Elements, I appreciate what Adobe is doing to keep this version up to date with Windows, so that if you use Elements on a Mac, you'll have the same experience that a Windows user would have. One of the biggest difference between lightroom 5 and its previous versions is the new ability to search for images that have uncorrected problems. Lightroom makes Adobe software more reliable than before as it is a good way to find errors. New features that make it more intuitive and easier to edit. It is also integrated with social media and enables you to get more polished results. I am always eager to see a brand new version of software we have been using so that with the upgrades, it keeps getting better and more useful than before. And I am glad that it has kept the link with my beloved photo editing software as it only works better than it used to. Lightroom 5 is simply big if i were to make a comparison with the previous version, but there is a new update which is Adobe Camera Raw, the new version is more streamlined and efficient. My experience with Lightroom 4 was good and I had impressed the level of increase over the previous version, but I am waiting to see what is new with the new version.
